

Factory-direct growth plan for Sarjapur homes

A practical growth system that combines Spacious Venture's in-house manufacturing, AI-assisted design previews, transparent initial quotes, local society proof, and website-led lead capture.

PRIMARY
KPI

THE CENTRAL IDEA

Do not sell another interior studio. Sell a faster trust system.

Spacious Venture already has the real assets that clients care about: completed homes, direct production capability, service commitments, and local Sarjapur access. The missing layer is a repeatable growth operating system that turns those assets into qualified site visits, factory visits, and quote requests.

Current reality

- + Outreach is active, but lead quality is mixed at roughly 50-60 percent.
- + 30-40 calls per day are being handled by you and a designer.
- + The app is in final stages, but broader growth scope is not yet formalized.

Growth opportunity

- + Use society proof instead of generic brochures.
- + Route leads into quote, AI preview, or factory visit based on intent.
- + Make the website and Google presence support every sales call.

Commercial ask

- + Approve a 90-day Growth Pilot at INR 18,000-21,000 per month.
- + Sales commission remains separate.
- + Hosting, ads, and paid API costs remain pass-through if used.

One-line pitch: Spacious Venture can become the most trusted factory-direct interior brand in Sarjapur by combining local project proof, AI-assisted consultations, transparent initial quotes, and disciplined follow-up into one operating system.

WHAT THE MARKET IS ALREADY SAYING

Sarjapur clients are comparing speed, trust, warranty, and price clarity.

The current Spacious Venture site describes a full-service interior design firm with personalized design, end-to-end service, quality, and craftsmanship. The services page already mentions design planning, space planning, material sourcing, 3D renderings, construction, installation, finishing, and project management. The growth plan should preserve that credibility but make the local conversion angle sharper.

Competitor pattern

- + Large brands sell delivery timelines, warranties, design centres, and package pricing.
- + Local Sarjapur competitors use local SEO pages, starting-price language, warranty claims, and factory/execution proof.
- + Clients expect proof before they agree to a site visit or factory visit.

Spacious Venture response

- + Lead with factory-direct execution, not generic luxury language.
- + Use 10-year workmanship and 2-year service support as trust anchors.
- + Use AI-assisted design preview and floor-plan quote as the modern consultation edge.

Market claim	Risk if copied blindly	Spacious Venture angle
45-day delivery	Can create disputes if designs keep changing.	40 days after design, scope, and commercial sign-off.
Experience centre	Spacious Venture does not currently have a premium show room.	Production transparency: factory, machinery, materials, and AI design demo.
Low starting price	Can attract low -quality leads and scope mismatch.	Free initial quote from floor plan w ith clear budget bands.
Generic portfolio	Does not help society-w ise sales calls.	Society-specific proof packs and local SEO pages.

BRAND POSITION

Factory-direct premium, supported by AI and local proof.

The app is not the whole story. The factory is not the whole story. The website is not the whole story. The winning position is the combination: a homeowner sees proof, understands the factory advantage, receives a faster design preview, gets a cleaner quote path, and knows what happens after sign-off.

Factory

IN-HOUSE PRODUCTION

CNC, ply, edge banding, labour capacity, and direct execution become the practical trust story.

AI app

FASTER CONSULTATION

Floor-plan-aware renders and proposal-stage cutlist planning make the first meeting more concrete.

Service

LONG-TERM CONFIDENCE

10-year workmanship guarantee and 2 years of free service support reduce buyer fear.

Local

SOCIETY PROOF

Completed projects and targeted outreach build trust faster than generic brand claims.

Approved public wording

Spacious Venture is a factory-direct interior design studio serving Sarjapur and East Bengaluru. We combine in-house manufacturing, AI-assisted design previews, transparent initial quotes, and long-term workmanship support to help homeowners move from floor plan to finished interiors faster and with fewer surprises.

What to claim confidently

- + Factory-direct price advantage from in-house manufacturing.
- + 10-year workmanship guarantee.
- + 2 years of free service for fixes.
- + 40-day target after design and scope sign-off.

What not to overclaim

- ! No 21-day move-in guarantee.
- ! No final CNC-grade cutlist promise from the current app.
- ! No luxury showroom claim.
- ! No final fixed price before measurements, material selection, and sign-off.

WHERE GROWTH STARTS

Win society by society, not citywide all at once.

The strongest near-term move is to organize outreach around societies where Spacious Venture has either project proof, active quote momentum, or useful future timing. Each society needs its own proof pack, page, call angle, and follow-up status.

3 PROJECTS CLOSED

Nambiar Millennia, Sarjapur

- + Use completed work as the strongest proof asset.
- + Target newer tower leads with exact floor-plan familiarity.
- + CTA: send photos, get initial quote, then book factory visit.

3 COMPLETED, 2 QUOTES BOOKED

Modern Spaaces Engrace 3 and 4

- + Highest active momentum from the current data.
- + Use quote booking as the main conversion KPI.
- + CTA: move from initial quote to factory/Al demo.

OUTREACH ONGOING, MOSTLY SATURATED

Prestige Green Gables

- + No closed projects yet, so do not overstate proof.
- + Use parallel quote and comparison angle.
- + CTA: benchmark scope, price, and timeline.

VILLA 41 PROOF

SVS Silver Woods

- + Keep as a villa credibility asset.
- + Mostly saturated, not active priority now.
- + CTA: villa consultation when new leads appear.

Operating rule: every society gets one WhatsApp proof pack, one website page, one call script angle, one status board, and one weekly decision: continue, pause, or intensify.

CLIENT JOURNEY

From scraped lead to signed-off production.

The pipeline must protect design time. Not every raw number deserves a design call. Every lead should be filtered, scored, and routed into the right next step.

CALL STRATEGY

Calm, consultative, proof-led selling.

The call should not sound like a desperate cold pitch. It should sound like a helpful local interior consultant who knows the society, can send relevant proof, and can make the first quote easier.

Opening script

Hey, this is Shayan from Spacious Venture. I know you were not expecting my call. We are speaking with homeowners in your society because our team is already working around Sarjapur. Did I catch you in the middle of something, or do you have 20 seconds?

Factory-direct hook

The reason some homeowners prefer us is that we manufacture directly instead of routing everything through middlemen. That gives better control over finish, timeline, and quote clarity.

AI app hook

If you share your floor plan, I can help the team prepare an initial design direction and quote path faster, instead of making you wait through a long back-and-forth.

Appointment close

Would you be open to a no-pressure initial quote from your floor plan? If it looks relevant, we can either do a quick AI design demo or schedule a factory visit.

Competitor response: Livspace and HomeLane are big brands and they work for many people. Where we are different is direct production control, customization, and factory access. Let us send you a parallel quote so you at least know if the scope and pricing you are getting is fair.

Timeline response: We can target about 40 days after design, scope, and commercials are signed off. If designs keep changing, we should not pretend the production clock has started. That protects both sides.

APP ROLE

The app is a sales weapon and production bridge.

The app should be positioned carefully. It is powerful for floor-plan-aware rendering, structured intake, PDF brief generation, and proposal-stage cutlist planning. It should not be sold as a magic final CNC system before site verification and working drawing approval.

Client consultation

- + Capture client details, rooms, style, budget, and storage requirements.
- + Use floor-plan annotations to guide render prompts.
- + Show faster visual direction during sales conversations.

PDF brief

- + Convert onboarding into a structured design brief.
- + Carry approved visuals and scope into a client-ready PDF.
- + Reduce manual note loss between sales, design, and production.

Cutlist planning

- + Generate module schedules and part rows for workshop planning.
- + Estimate sheets, board area, and edge banding.
- + Export CSV, XLSX, and PDF drafts for review.

Technical reliability requirements

- + Keep provider keys in environment files only.
- + Rotate any API key pasted into chat.
- + Fix image generation file naming so labels like Living / TV Wall never become invalid Windows paths.
- + Run provider status and preflight before demos.
- + Hide mock/SVG fallback previews from client-facing final presentations.

PUBLIC WEBSITE

Turn spaciousventure.com into a lead engine, not a brochure.

The website improvement should be simple and CEO-friendly. No large technical rebuild pitch first. The v1 need is cleaner positioning, faster pages, WhatsApp lead capture, local SEO pages, project proof, and weekly content updates.

Recommended simple stack

- + Static HTML, CSS, and small JavaScript.
- + GoDaddy-compatible upload for immediate deployment.
- + No jQuery, html5shiv, old sliders, or heavy animation plugins.
- + Mobile zoom enabled for accessibility.
- + Future hosting option: Vercel or Cloudflare Pages.

Implemented page plan

- + Home page with factory-direct Sarjapur positioning.
- + Sarjapur interiors SEO page.
- + Modular kitchen in Sarjapur page.
- + Factory-direct process page.
- + Society pages for Nambiar, Engrace, Prestige Green Gables, and SVS Silver Woods.

Website element	Business purpose	CTA
Home hero	Explain factory-direct interiors in one clear screen.	Free initial quote and factory visit.
Society pages	Support active outreach and WhatsApp follow -up.	Ask for project photos or get society quote.
Quote form	Capture useful lead info before WhatsApp.	Send details to WhatsApp.
Project gallery	Turn completed work into conversion proof.	View relevant project and request quote.
Content system	Keep Google, Instagram, Facebook, and website active.	Weekly proof and updates.

CEO explanation: The website does not need to become complicated. It needs to answer the exact questions clients ask on calls: Have you worked near my society? Can I see proof? Why are you different from big brands? Can I get a quote from my floor plan? Can I visit the factory?

ALREADY PROTOTYPED

A simple new website direction is ready to move into deployment.

The new website is designed to be easy for the team to understand and easy for GoDaddy hosting to support: static pages, strong WhatsApp CTAs, local SEO pages, project proof, and no heavy old plugins.

Desktop homepage preview: factory-direct positioning, society proof, quote form, process, and WhatsApp CTA.

Mobile preview: lead capture remains visible for homeowners opening links from WhatsApp and Instagram.

What is done

Prototype static website, eight pages, local SEO structure, WhatsApp quote flow, sitemap, robots file, and GoDaddy upload notes.

What needs access

GoDaddy or current website access, Google Business Profile access, Meta access, approved project photos, and final copy approval.

What happens next

Replace placeholder/render images with approved real project media and publish the improved version as the first growth asset.

ORGANIC LEAD SYSTEM

Every finished project becomes four assets.

Spacious Venture should not treat Instagram, Google Business, the website, and WhatsApp as separate work. One project should produce all four: a reel, a Google update, a website case study, and a WhatsApp proof pack.

Instagram

2 posts or reels per week. Focus on before/after, factory details, site progress, client handover, and material decisions.

Facebook

Cross-post the same content so effort stays light while reach increases.

Google Profile

1 update per week with society/project proof and quote CTA. Collect reviews after handover.

Website

1 project or case-study update every two weeks, with society-specific proof and WhatsApp CTA.

Content type	Example	Sales use
Factory proof	CNC, edge banding, ply, finishing, assembly.	Trust builder for boutique-vs-aggregator objection.
Project proof	Kitchen, TV w all, wardrobe, mandir, foyer.	WhatsApp proof pack after call.
Society proof	Nambiar and Engrace pages.	Follow-up link during society outreach.
Process proof	Floor plan to render to quote to production.	Explains why the app matters.

TIME REQUIRED USING AI

**14 days to
launch the
first version.
30 days to
make the
system
operational.**

With account access and raw media, AI can compress the website, content, proof-pack, and reporting setup timeline. The realistic plan is not to finish all growth in 14 days. It is to launch the visible system in 14 days and then optimize it over the 90-day pilot.

DAY 0

**Access
handover**

Receive GoDaddy/current website access, Google Business Profile, Instagram/Facebook, project media, warranty/timeline approval, and call-flow confirmation.

DAYS 1-2

**Audit and
setup**

Freeze positioning, organize media folders, clean website copy, set up lead tracking sheet, prepare society proof-pack structure.

DAYS 3-7

Website v1

Deploy static website improvement with homepage, Sarjapur page, factory process, quote CTA, and first society pages.

DAYS 8-14

**Content and
CRM**

Launch WhatsApp proof packs, Google posts, Instagram/Facebook rhythm, call scripts, and weekly reporting template.

DAYS 15-30

**Operational
system**

Refine scripts from objections, add real project media, improve pages, track visits, and stabilize app demo readiness.

What can happen immediately

- + Publish improved website or staging preview.
- + Start society-wise lead tracking.
- + Create WhatsApp proof packs for Nambiar and Engrace first.
- + Begin 2 posts per week across Instagram and Facebook.
- + Use updated call script and quote CTA from day one.

What takes the full pilot

- + Google ranking improvement and local SEO compounding.
- + Review/testimonial capture after handovers.
- + Consistent qualified lead quality improvement.
- + Society-by-society learning and prioritization.
- + Measurable closed-project impact.

TIME COMMITMENT REQUESTED

30-32 hours / week

This capacity covers website rollout, app/demo coordination, sales call support, local SEO, social posting, proof-pack creation, lead tracking, and weekly reporting during the pilot.

EXECUTION PLAN

Simple enough to start immediately. Structured enough to measure.

DAYS 1-15

Access, cleanup, and tracking

Collect GoDaddy, website, Google Business Profile, Instagram/Facebook access. Organize raw media. Set up lead sheet. Finalize society priority list. Deploy the simple website improvement or interim CTA fixes.

DAYS 16-30

Website and proof packs

Publish static website pages, quote form, society pages, and WhatsApp CTAs. Build proof packs for Nambiar, Engrace, Prestige Green Gables, and SVS Silver Woods. Start tracking WhatsApp clicks and quote requests.

DAYS 31-45

Sales conversion sprint

Run calls through a qualification script. Push hot leads into floor-plan quote, AI design preview, or factory visit. Use daily objection notes to improve scripts and website copy.

DAYS 46-60

Local SEO expansion

Add project proof, FAQ sections, Google Business updates, and society-specific copy. Collect reviews after handover where appropriate. Improve pages based on real call objections.

DAYS 61-90

Scale what works

Double down on the societies producing visits and quote requests. Pause low-quality lists. Add referral requests, testimonial clips, and case studies from active projects. Present pilot results and next retainer scope.

WHAT SUCCESS MEANS

The primary KPI is booked visits, not vanity reach.

The pilot should be judged by movement through the sales pipeline: qualified calls, floor-plan quote requests, site/factory/Al demo visits, and closed projects by ticket band.

70%+

TARGET QUALIFIED LEAD QUALITY

Move from mixed raw outreach to better filtered society lists and call scoring.

Visits

PRIMARY KPI

Factory visits, site visits, and Al demo appointments are the leading indicators of revenue.

Weekly

CEO REPORT

Short status: calls, qualified leads, visits booked, quote requests, closes, blockers, next actions.

Metric	Why it matters	Owner
Raw calls made	Shows outreach volume, but not quality.	Sales team
Qualified calls	Shows real lead quality.	Growth Partner
Floor plans received	Signals real intent.	Growth Partner + designer
Initial quotes requested	Connects outreach to sales action.	Designer
Visits/demos booked	Main pilot KPI.	Growth Partner
Closed revenue by band	Shows business impact and commission alignment.	Leadership
Website/WhatsApp clicks	Shows digital support for sales calls.	Growth Partner

GROWTH PARTNER SCOPE

One accountable owner across tech, digital, and sales operations.

The role is not only social media. It connects the app, website, Google presence, WhatsApp follow-up, sales scripts, lead tracking, and weekly reporting. The designer and leadership still own final design judgment and commercial approval.

Included in 90-day pilot

- + App maintenance coordination and demo readiness.
- + Website lead-generation improvements and SEO pages.
- + Google Business Profile weekly updates.
- + Instagram/Facebook content rhythm.
- + Sales call scripts, lead tracking, and weekly reports.
- + Society proof packs and quote/demo follow-up system.

Requires leadership/team support

- + Access to GoDaddy, website, Google Business Profile, Meta accounts.
- + Raw project photos and videos.
- + Timely quote/design inputs from the designer.
- + Approval on claims, warranties, pricing, and timelines.
- + Clear decision on whether calls are all handled or only qualified leads.

COMMERCIAL PROPOSAL

INR 18,000-21,000 / month

90-day Growth Pilot retainer. Existing sales commission remains separate: INR 5,000 for deals below INR 8 lakh, INR 10,000 for deals below INR 15 lakh, and INR 15,000 for deals above INR 15 lakh.

Hosting, paid ads, paid API usage, and external software costs are separate pass-through expenses if approved.

APPROVAL NEEDED

Start small, measure hard, scale what works.

This proposal is intentionally not overbuilt. The first 90 days should prove whether a disciplined factory-direct, AI-assisted, society-specific growth system can produce better visits and quote opportunities.

Immediate approvals

- + Approve 90-day Growth Pilot retainer.
- + Share GoDaddy, website, Google Business Profile, Instagram/Facebook access.
- + Share raw project media and project permission status.
- + Approve website copy and public claims.
- + Confirm call ownership: all calls or qualified calls only.

First 7 days after approval

- + Deploy website improvement or publish temporary lead CTAs.
- + Create society lead sheet and proof pack folders.
- + Prepare Google Business and Instagram content calendar.
- + Run app demo readiness and provider checks.
- + Start weekly leadership report.

Final pitch line: Spacious Venture does not need to become the loudest interior brand in Bengaluru first. It needs to become the most trusted factory-direct choice for the Sarjapur societies where the team already has access, proof, and execution capability.
